## What is excel HR?

excel HR is a safe and effective laser that combines two clinically proven laser technologies to target the primary signs of aging and photodamage including unwanted pigmentation, redness and veins on the face and body.

## How does the excel HR laser work?

During the treatment, your provider will select one of excel HR's two lasers and customize the treatment settings to target the color and depth of your skin concern. The laser light is converted into heat energy and absorbed only by the cells containing excessive pigment or veins. This causes effective destruction while leaving the surrounding tissue undamaged.

## What does excel HR treat?

Whether it be unwanted veins, redness or pigment on the face and body, excel HR has the capability to treat a wide range of skin concerns safely and effectively. In addition to addressing skin concerns, excel HR can remove unwanted hair on all body areas and skin types.

## What is the treatment like?

excel HR treatments can feel similar to a rubber band snapping against skin. The treatment is tolerated well with little to no discomfort. To enhance comfort and safety throughout the treatment, a cooled treatment tip will be in contact with the skin throughout the session.

## How long does the treatment take?

Treatment time varies based on the area of treatment - most patients are treated within 5-10 minutes however some treatments may take up to 30 minutes.

## What can I expect following treatment?

Typically, you can return to your normal activities immediately following the treatment. Redness may be expected following the treatment, however it will resolve within a few days. Treated pigmentation and brown spots will darken following the treatment and slough off within 3 to 6 days.

## How many treatments will I need?

Most patients require only one to two treatment sessions. The number of treatments will vary based on your concern. Your excel HR provider will discuss a customized treatment plan during your consultation.

## Results you can count on—
